Description

Cabin Flex is the smart and flexible cabin combination. This solution eliminates all the problems associated with the establishment and service of outdoor technical rooms. The cabin is constructed PUR foam insulated building panels, which makes them easy to handle and adjust individually.

As the name indicates, Cabin Flex is extremely flexible. The solution consists of a base module which is available in two standards. The cabin is modular and is not limited to the base module. It can be delivered as a connected system providing more internal space. Cabin Flex can be modified in exterior as well as interior design, to meet the requirements that may be for a specific business case.

Accessories

There is a wide range of accessories suited for the Cabin Flex. These make it possible to achieve a high degree of customization, both on the inside as well as on the outside of the Cabin Flex. Check out our accessories catalog and select those who create the Cabin Flex that fits your needs and desire. See next pages for examples or see separat accessories catalog.
